STANDARD OPERATING PROCEDURES

RC-MRO User Manual

Operationalizing Preventive and Predictive Maintenance across Vehicle Registrations, Daily Inspections, and PM Forecast Tracking.

Fleet Maintenance System

Version 2026.1

SYSTEM ARCHITECTURE

Three Core Maintenance Workflows

Module 01

Equipment Registration

Register new assets, define service standards, activate units, and initialize baseline PM tracking thresholds.

App Registry Setup

Module 02

Daily Status & Telemetry

Log daily odometer readings, auto-calculate distance increments, and record FMEA operational risk flags.

Real-Time Risk Logging

Module 03

PM Plans & Servicing

Track PM Due alerts, review 12-month rolling forecast matrix, and trigger servicing completion increments.

Automated Target Shifts

MODULE 01 • EQUIPMENT REGISTRATION

Step 1: Access Registry & Fill Registration Form

STEP 1A

Navigate to Registry

Go to **App Registry** > **Equipment Registry** and click the blue **+ Add Equipment** button.

STEP 1B

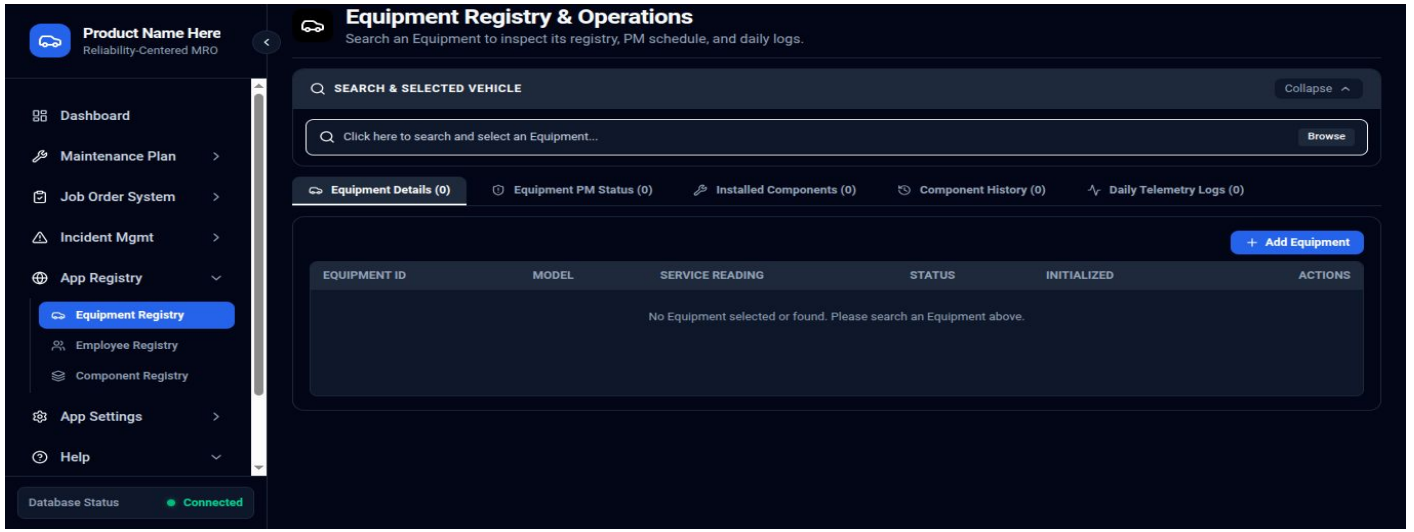

Input Required Metadata

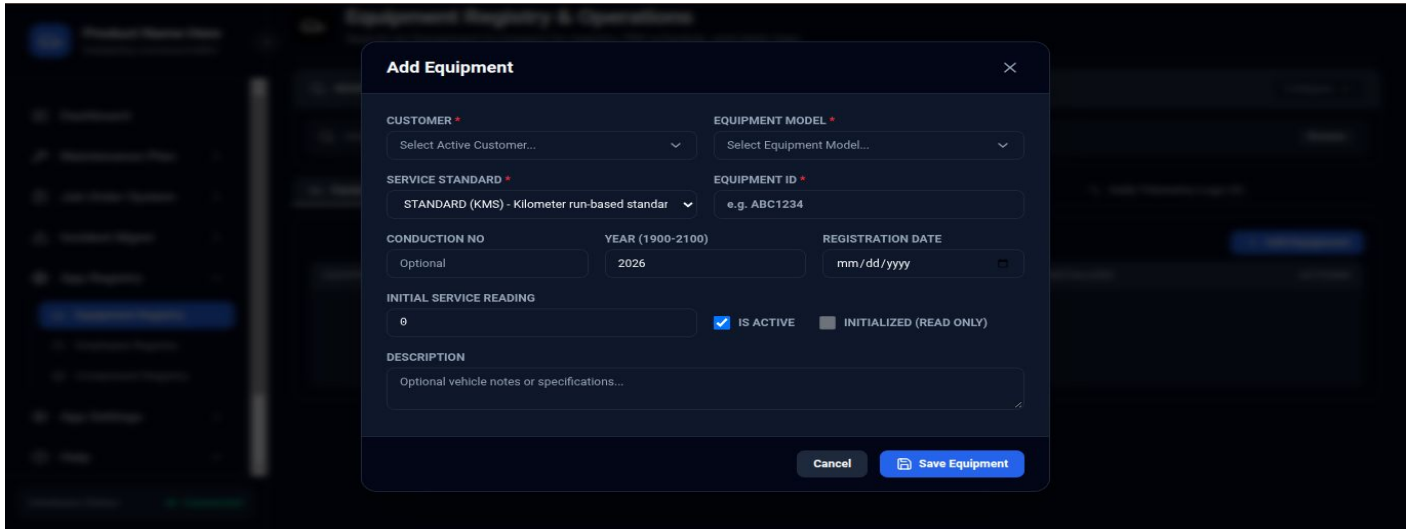

Fill mandatory fields: **Customer**, **Equipment Model**, **Service Standard** (e.g. KMS), and **Equipment ID**.

STEP 1C

Activate Asset

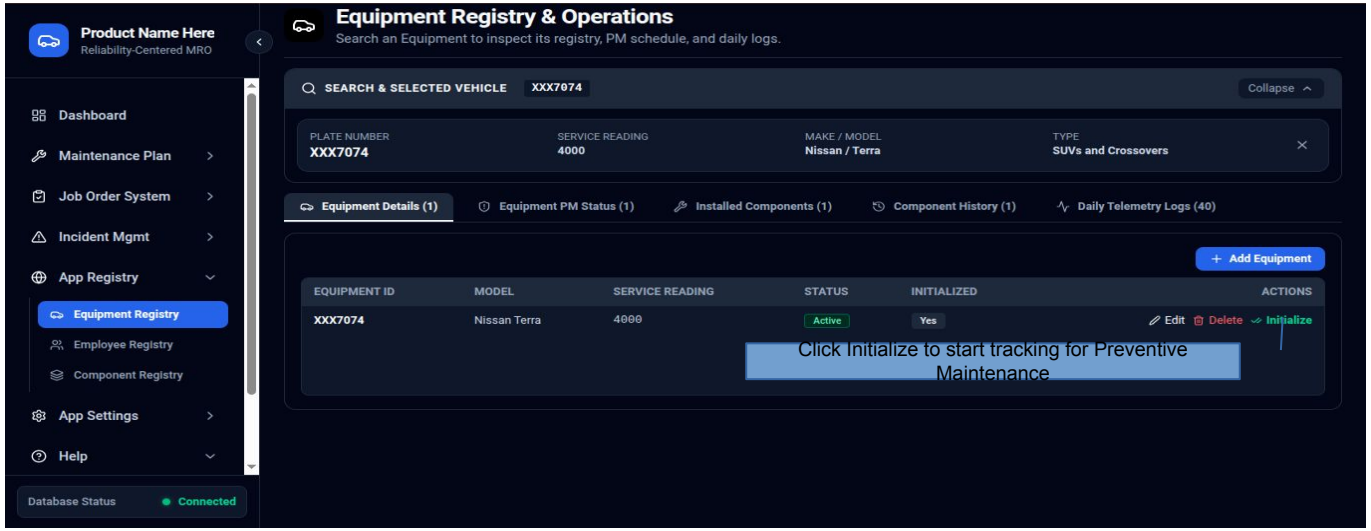

Ensure **IS ACTIVE** checkbox is enabled before clicking **Save Equipment**.

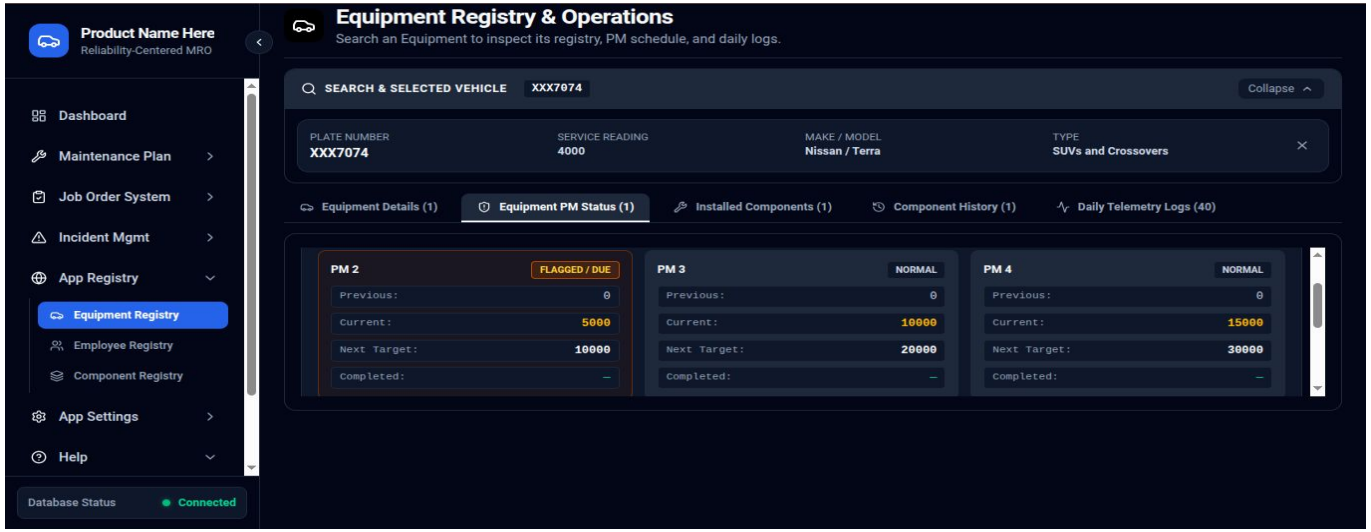

MODULE 01 • PM INITIALIZATION

Step 2: Initialize Asset & Customize PM Thresholds

ACTION A

Click Initialize Button

In the Equipment Registry table, click **Initialize** under Actions to launch PM tracking for the vehicle.

ACTION B

Validate Initial Status

Switch to **Equipment PM Status** tab to view auto-generated baseline schedules (PM 2, PM 3, PM 4).

ACTION C

Customize Targets & Save

Click **Update PM Schedule** to customize targets or toggle **Flagged / Due**, then click **Save PM Schedule**.

MODULE 02 • TELEMETRY LOGGING

Updating Daily Odometer & Inspection Logs

PROCEDURE 01

Select Vehicle via Browse

Open **Maintenance Plan** > **Daily Inspection**. Click **Browse** to search registered fleet units.

PROCEDURE 02

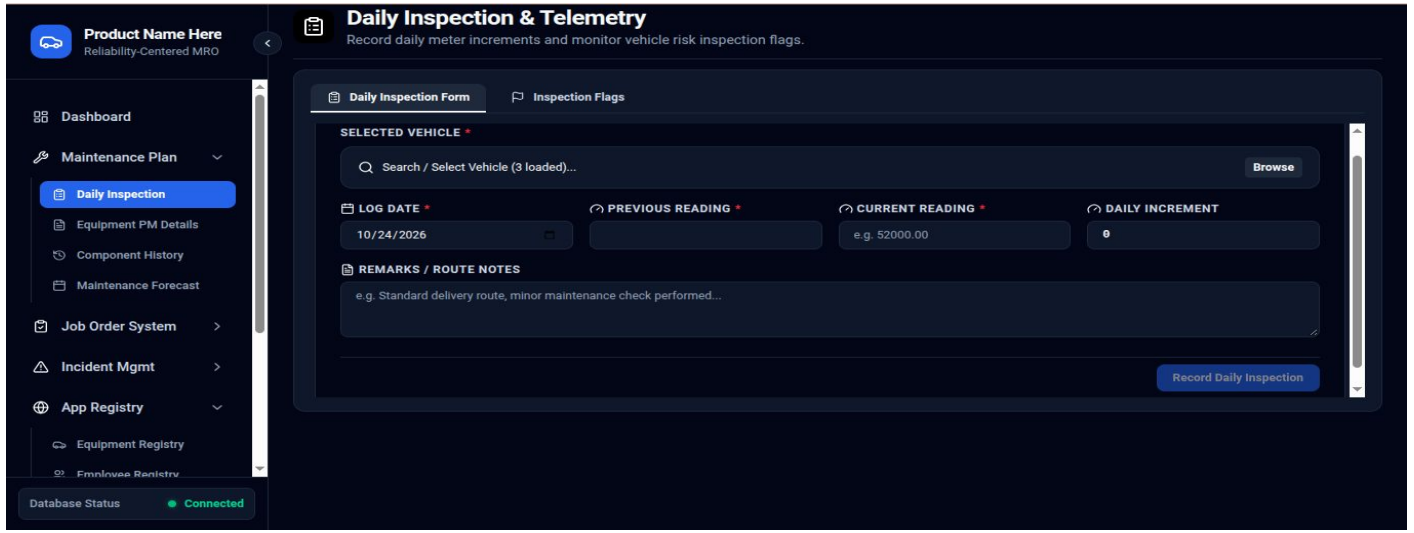

Auto-Populated Base Meter

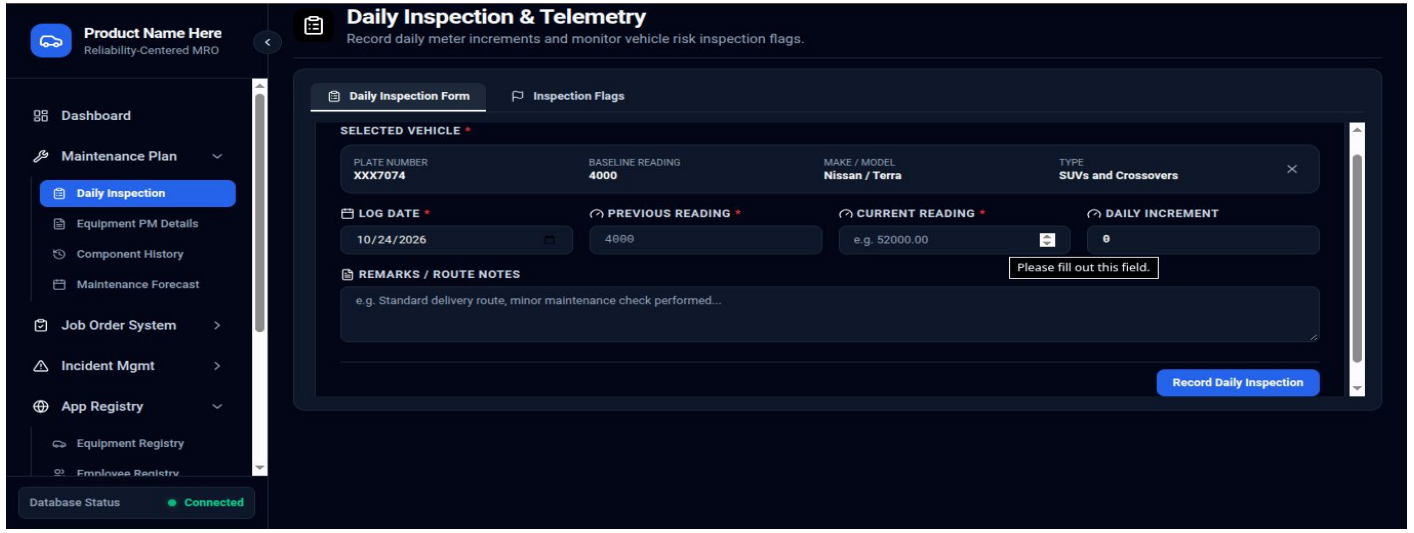

Selecting unit (e.g. XXX7074) automatically populates the **Previous Reading** baseline value.

PROCEDURE 03

Record Odometer Increment

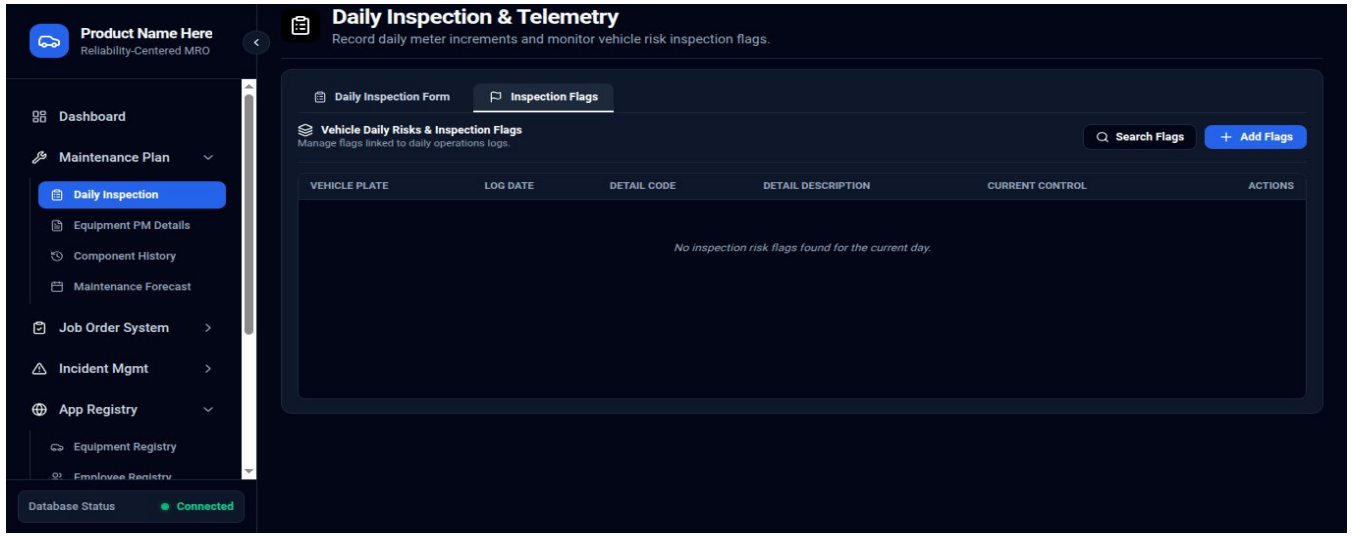

Enter **Current Reading**. System calculates *Daily Increment*. Click **Record Daily Inspection**.

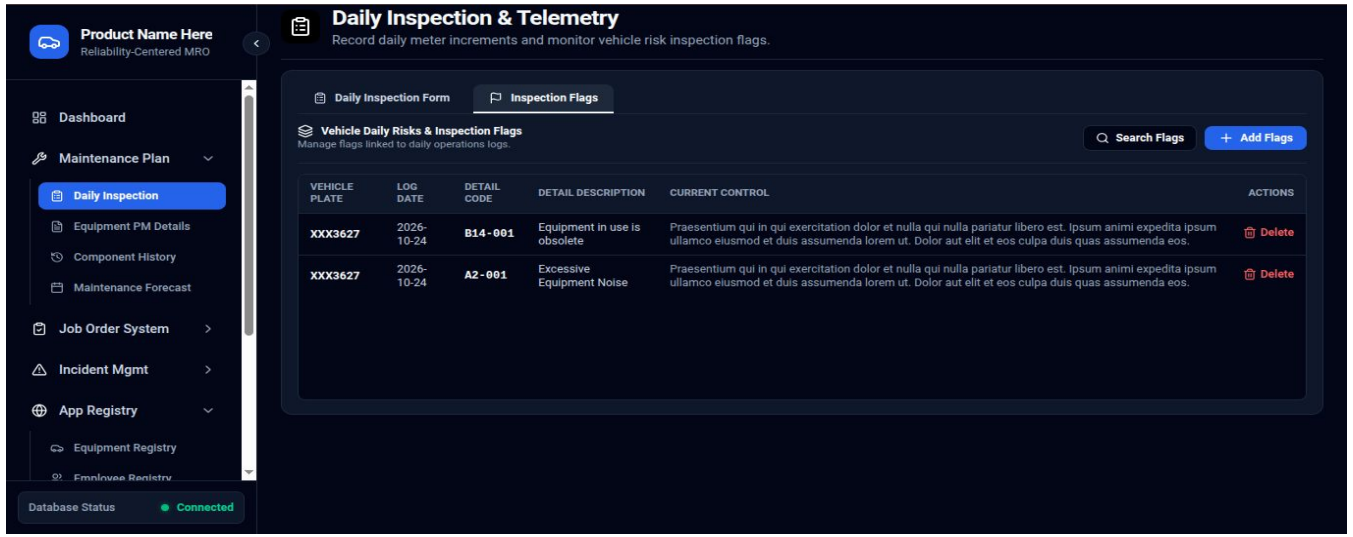

MODULE 02 • RISK MANAGEMENT

Logging Operation Risk Flags (FMEA Settings)

1. Select FMEA Preset

Under **Inspection Flags** tab, click **+ Add Flags**. Choose standard FMEA issue code (e.g. *[A2-001] Excessive Noise*).

2. Same-Date Validation

Only vehicles inspected on the **current date** can receive active inspection flags.

System Restriction Rule

Inspection Flags cannot be backdated under any operational circumstance.

MODULE 03 • PLAN TRACKING

Monitoring Equipment PM Status & Due Schedules

STEP 3A

Navigate to PM Details

Go to **Maintenance Plan** > **Equipment PM Details** to view system-wide PM compliance.

ALERT IDENTIFICATION

PM DUE Highlight Callout

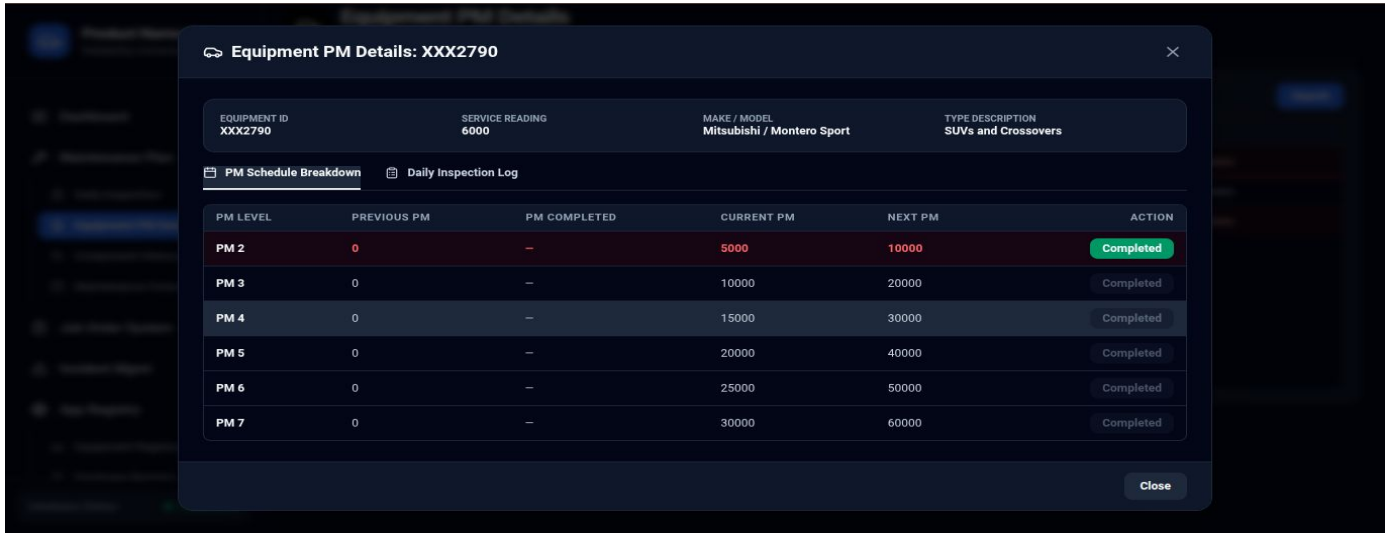

Vehicles reaching threshold mileage are highlighted with a red **PM DUE** badge (e.g. XXX2790, XXX7074).

STEP 3B

Open Schedule Breakdown

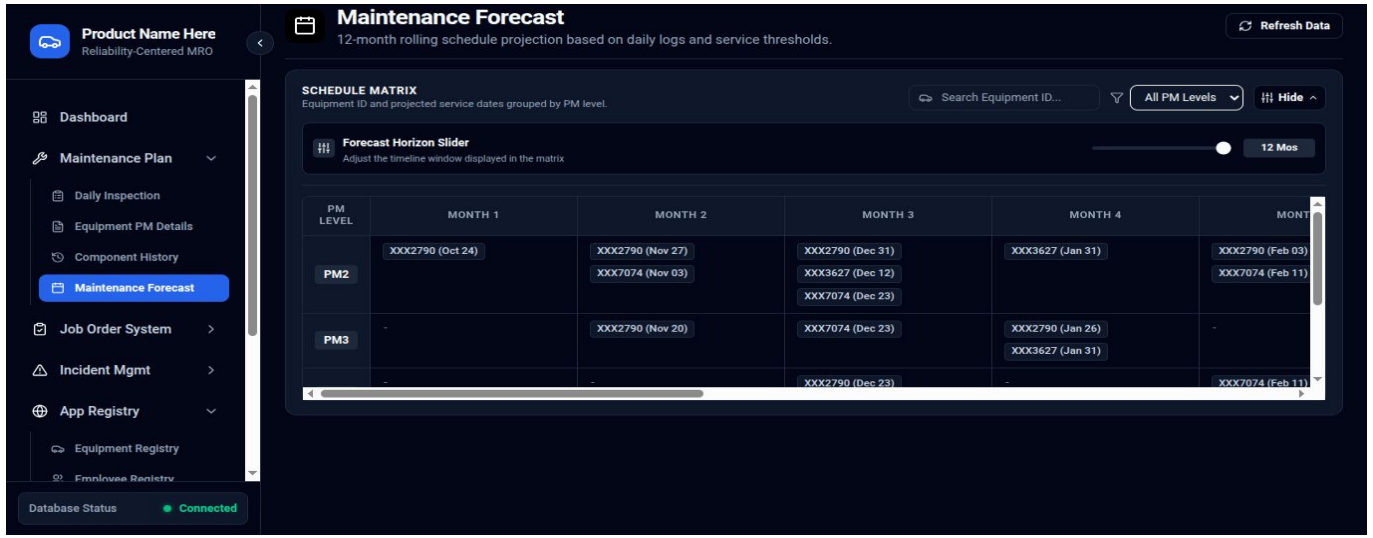

Click on a flagged vehicle row to expand individual PM Level breakdowns and active target readings.

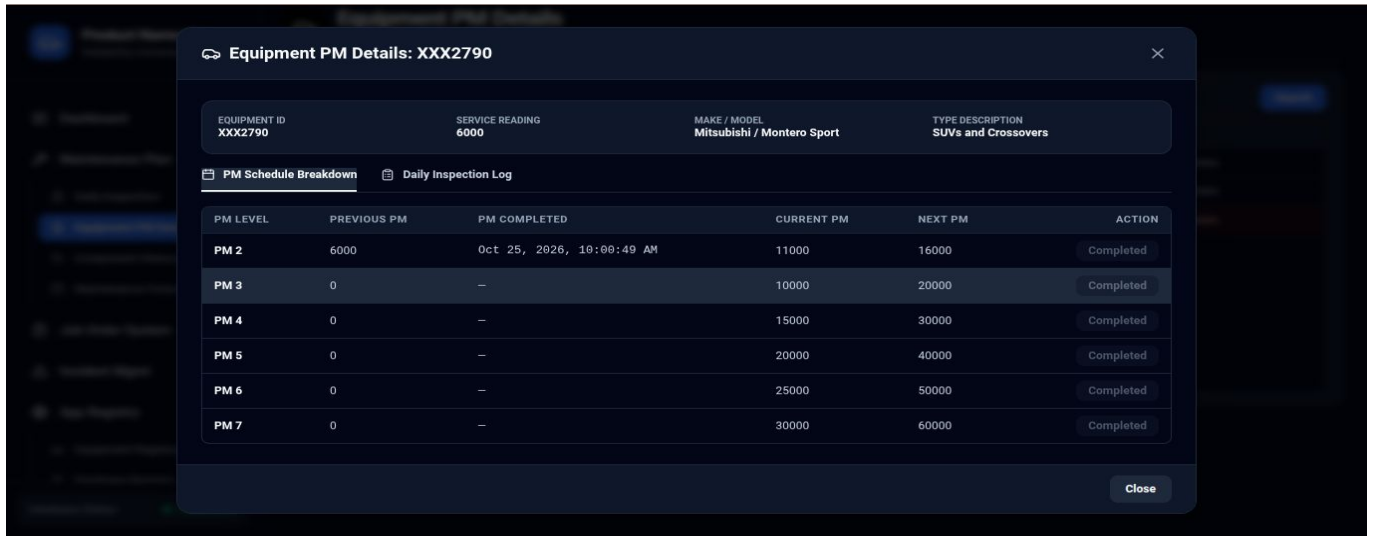

MODULE 03 • FORECAST & EXECUTION

12-Month Forecast Matrix & PM Completion

1. 12-Month Rolling Forecast

Filter **Maintenance Forecast** matrix by Equipment ID, PM Level, or Horizon Slider (1-12 Months) to anticipate parts demand.

2. Trigger 'Completed' Action

Once servicing is executed, click the green **Completed** button in the PM Schedule Breakdown modal.

3. Automated Target Shift

System populates completion timestamp, moves reading to **Previous PM**, and increments *Current* & *Next Target* automatically.

OPERATIONAL COMPLIANCE CHECKLIST

RC-MRO Operational Best Practices

Daily Telemetry

Ensure odometer readings are entered daily to maintain accurate PM increment predictions.

Real-Time Flags

Log FMEA risk flags on the day of occurrence; backdating is strictly prevented by the system.

Timely Servicing

Mark PM servicing as completed immediately upon completion to advance target intervals.
